

Summary

Károly Papp: Recommendatory (5)

Zsolt Pozsgai: Prologue (6)

János Sallai: Introduction to the First issue of Police Studies (7-14)

The need for the publication of a special periodical on the theory and practice of law enforcement has existed since the establishment of the state police force. A specialised police journal to inform its readers about the various specialised areas and the life of the professional staff has always been present for the law enforcement community, albeit under a different title in each historical period. This is one of the reasons why, based on and continuing this tradition, a quality periodical reporting about the current professional and scientific life in the field of law enforcement should be published again, entitled “Police Studies”.

Erika Malét–Szabó – Hella Hegyi – Judit Hegedűs – Erika Szeles – Krisztián Ivaskevics: Basic Police competences (15-74)

In our study, we will present the joint research results of the Police Science Council and the Basic Competence Research Group established under the auspices of the project KÖFOP-2.1.5-VEKOP-16-2016-00001. The aim of the research was to define basic police competences based on the basic public service competencies. In the course of the research, 110 interviews (78 police officers) and 1443 online questionnaires (378 police officers) were recorded, which resulted in specific policing requirements.

Ádám Kalmár: Innovation proposals for the branch of border policing service in managing the mass migration (75-100)

The Simple Migrant Identification System is a unique technical and organizational solution which enables to identify apprehended third-country nationals after an illegal border crossing and track their way during aliens policing procedures.

Miklós Angyal: An Android application for dead body investigation (101-131)

The study demonstrates the theoretical and forensics medical basis of dead body investigation required in unnatural death cases. Furthermore, the aim of the study is to present an Android application easy to use on crime scenes by general doctors or crime scene investigators. The usage of the application along with a written study enables a better and more accurate medical and criminalistics work on unnatural or suspicious death cases.

Gergely Gárdonyi: New concepts in legal regulation of crime scene investigation (132-146)

The new Criminal Procedure Law coming into force in early July, 2018, concerns the regulation of crime scene investigation as well. Within its framework new concepts and methods are necessary for documenting crime scene investigation procedure, which aims the reconstructability of each process, thereby securing the chain of custody.
